New legislation on pigments

**On January 4, 2022, the new legislation for PMU and Tattoo pigments will come into effect. Ecuri pigments meet these new requirements.
Below is a short summary**

1-Azo pigments are not allowed. This is a special group of pigments which were never intended for tattooing but have become very popular because it is cheap and very easily absorbed by the skin. Azo pigments can split off aromatic amines. These amines are carcinogenic. That is why it is banned now.

2-4 Jan 2022 Iron Oxide Pigment may no longer be used because it contains minuscule amounts of Nickel, Chromium or other heavy metals. Ecuri is convinced that its Iron Oxide pigments are safe, we are not allowed to use them anymore.
Below is advice on which pigment may be used.

Replacement Pigments
Salt & Pepper = Wood
Dark Brown 2 = Chocolate
Espresso = Mocca
Deep Blond = Deep Olive
Caribbean Brown = Mocca
Brown Black = Intenso

XL Blond = Wood
XL Brown = Cocoa
Almost Black = Intenso
Albast Brown = Mocca

3-Only two pigments are allowed for green and blue:
Green 7 CI 59040
Pigment Blue 15:3. CI 74160 phthalocyanine
only until 2023
After that no longer allowed

4-Isopropyl Alcohol as a solvent is no longer allowed. Until now, all suppliers used Isopropyl. Ecuri has switched to Ethanol, which is ordinary alcohol that is also found in beer and wine.

5-PAKS (Poly Aromatic Hydrocarbons)
Black carbon pigments should hardly contain PAKS
This is especially a problem for the tattoo world.

ECURI

COSMETICS

Small Spill

For liquid pigments, collect using absorbent materials. Diluting with water is possible. Flush residue using copious water. For dry powder spills, inert materials such as sand may be added to control dusting prior to cleanup. Avoid excessive generation of dust. If dust is generated, use appropriate respiratory protection. Industrial grade vacuum sweepers are also recommended. Place spilled material into appropriate waste containers for disposal.

Large Spill

For liquid pigments, collect using absorbent materials. Diluting with water is possible. Flush residue using copious water. Dispose at suitable refuse site according to local and national official regulations. For dry powders, contain spilled material immediately with an inert substance such as sand or earth. Use plastic or aluminum shovel to transfer diluted waste material into appropriate containers for disposal. Materials, which cannot be recycled into your process, should be land filled in accordance with Federal, State and Local environmental control regulations.
